

SUSTAINABILITY STATEMENT

OUR COMMITMENT

Timeless design with lasting quality is the heart of our approach to sustainability.

We are committed to environmental and social responsibility throughout our business. That means working with certifications and testing to ensure our product quality, fair working conditions and responsible manufacturing. Our long-term supplier relationships are built on transparency, mutual respect, and a shared commitment to responsible business practices.

Sourcing materials that meet our standards while limiting environmental impact is an ongoing journey. Our efforts include improving how we design, manufacture, package, and ship, always with a focus on using certified and more sustainable materials..

OUR APPROACH

We aim to offer a considered collection of beautiful, high-quality objects with lasting relevance. Products that outlive trends and remain relevant for generations to come.

MATERIALS

We always source the materials best suited to ensure the integrity of the product – in terms of aesthetics, quality and cost. We introduce recyclable materials when possible and strive to develop solutions for easy assembly and disassembly – making it possible to replace and ultimately dispose damaged parts properly.

We continuously explore new and more sustainable materials and production methods. We believe in enabling our teams and our partners to act responsibly and embrace better ways of doing business. While we recognize the challenges ahead, we are committed to learning, sharing, and contributing to a more sustainable future.

PACKAGING

Packaging represents a significant part of our footprint, and we continuously work to implement better and more sustainable solutions. However, first priority is always to protect the product and minimize the risk of damage. Secondly, we focus on minimizing packaging and avoiding unnecessary plastic components.

All packaging is made using FSC®-certified materials from responsibly managed forests and controlled sources - with respect for nature, people, and wildlife.

CARBON ACCOUNTING

For the past three years, we have prepared an annual CO₂ report to create transparency around our total emissions and to take active responsibility for our climate footprint. Now, we're taking the next step: In the coming years, we are working towards setting concrete reduction targets to ensure that our efforts drive real, measurable results.

To make informed decisions at the product level, we use a climate screening tool that identifies where and how our activities have an impact.

SUPPLIERS

We work with suppliers who share our values and meet our high standards for quality, safety, and social responsibility. We strive to maintain a close and solid relationship with our suppliers, and we frequently visit the factories to guide and support our suppliers.

As part of our social responsibility efforts, we are members of Amfori and conduct third-party audits under the BSCI (Business Social Compliance Initiative) on our Key suppliers. Through our Code of Conduct and certifications such as BSCI and FSC™, we support workers' rights across our supply chain. We strive to build partnerships based on trust, open dialogue and shared value - with the goal of improving industry standards and contributing to better working standards.

ENERGY

Our headquarter in Horsens, Denmark, operates entirely on 100% renewable energy. We are actively engaging with our key suppliers on a shared journey toward greater sustainability, with the aim of encouraging increased use of renewable energy throughout our supply chain.
